

ONTARIO HOSPITAL SERVICES COMMISSION

Annual Report 1963

Statistical Supplement

Digitized by the Internet Archive in 2023 with funding from University of Toronto

FOREWORD

The Annual Report of the Ontario Hospital Services Commission for 1963 is issued in two parts. The first part is a general summary of the significant factors and trends in the general experience of the hospitals and the Plan, while the second is a statistical supplement which provides detailed information about each hospital approved under the Plan.

The information found in the Statistical Supplement is derived principally from the information supplied by the hospitals on their Annual Returns, as required under the terms of the Federal-Provincial Agreement. Reference to the text is important, as it clarifies factors that are not immediately apparent from a cursory view of the data.

I would like to pay tribute to hospitals and to the staff of the Commission, particularly the Research and Statistics Division, for the co-operative effort in producing this Annual Report.

J. B. NEILSON, M.B.E., M.D., Chairman.

J.B. heilsen

HOSPITAL HIGHLIGHTS-1963

I. FACILITIES AND SERVICES

The intention of the supplement to the 1963 Annual Report will be to present in detail the use made of hospital services, and the associated costs for those hospitals and nursing homes operating under the jurisdiction of the Ontario Hospital Services Commission.

The small tables (A to K) that are interspersed in the next few pages afford a comparison of the volume of patients treated and their lengths of stay, the utilization being made of hospital beds and services, and the prevailing trends in hospital staffing.

Most of the statistical and financial data were derived from edited and certified Annual Returns received from hospitals and related facilities. The figures shown in Tables 1 to 9, and 13 to 20 are taken from the Annual Returns of Hospitals and relate to public active treatment hospitals including Red Cross Outposts (Tables 1 to 9), public convalescent and chronic hospitals and units, (Tables 13 to 16) private active treatment and chronic hospitals, (Tables 17 and 18), federal hospitals, (Table 19) and nursing homes temporarily approved for chronic care, (Table 20). The morbidity data in Tables 10 to 12 were accumulated from the hospital admission-discharge forms processed and tabulated in 1963.

Excluded from this supplement are tuberculosis sanatoria, Ontario Hospitals for the mentally-ill, private hospitals for the mentally-ill or retarded, and those facilities in federal hospitals providing domiciliary and long-term mental care.

Hospital Accommodation in Ontario

The construction of new hospital facilities and the renovation of older hospital areas continued unabated in 1963. The total beds available at the end of 1963 was 43,133, representing a net increase of 2,036, or 5.0 percent over 1962. The growth in the number of convalescent beds was the largest although this group formed only 2.7 percent of the total beds in service.

TA		

	Total Rated Bed Capacity	% Increase or Decrease in Beds	‡		mber Populatio	n
Type of Bed	Dec. 31, 1963	1963/62	1960	1961	1962	1963
Active Treatment	34,244	3.8	4.9	5.0	5.2	5.3
Convalescent Care	1,164	54.2	.1	.1	.1	.2
Chronic Care	7,725	5.1	1.2	1.2	1.2	1.2
Total	43,133	5.0	6.2	6.3	6.5	6.7

More detailed information on beds by type of service and type of hospital is shown in Tables M, 1, 13, 17, 19 and 20.

The net increase of 1,251 active treatment beds in public general hospitals resulted from additional wings being built on a large number of existing hospitals plus a new hospital in Richmond Hill. Footnote number 12 to Table 1 on page 7 lists those hospitals that completed building programmes in 1963.

The 54.2 percent increase in public convalescent beds was the result of the completion of the new Riverdale Hospital in Toronto. The initial rated capacity of convalescent beds at Riverdale as at December 31, 1963, was 409. None of these had come into operation during 1963.

Five new units for the care of the chronically-ill were completed. These units brought 119 beds into use. The new Riverdale Hospital, Toronto, completed in June, provided 438 beds for chronically-ill patients.

There was very little change in the amount of bed accommodation provided by private hospitals, federal hospitals and nursing homes. Four private hospitals ceased operation in 1963 reducing the number of beds by 50. The footnotes to Table 17 provide detailed information concerning these institutions. Temporary approval was also withdrawn from three nursing homes when public facilities for the care of the chronically-ill became available in those areas. Very little change was reported by federal hospitals in the number of beds available for insured residents.

Volume of Hospital Care

As will be seen in Tables B, C, D and E the utilization of all hospitals continued to show increases in most areas in keeping with past trends.

Total, all levels of care	83.5	83.9	83.9	82.5	151	152	153	156

In Table B, Parts I and II, small increases will be noted for 1963 under the sections entitled total patients under care, days of care, and admissions per 1,000 population. Because of the increase in the number of beds available in these regions where there was a shortage of beds, a rise in the number of admissions and days of care could be expected. The fact that the total admissions per 1,000 population increased by 3 was wholly attributable to admissions to active treatment beds. On the other hand, the decline in the percentage of beds occupied was due largely to the fact that not all of the available convalescent beds were in operation by the end of 1963.

Although the days of care per 1,000 population shown in Table C increased only slightly in total, the greatest rise in the number of days occurred on behalf of active treatment patients. Minor adjustments in the 1962 figures shown in the 1962 Supplement were found to be necessary and are incorporated into this Table.

TABLE C

				Days of C	are		
		Per 1,000	Population		Percentag	e Increase o	r Decrease
Public and Private Hospitals	1960	1961	1962	1963	1961/60	1962/61	1963/62

2. Convalescent care	22	22	31	34		40.9	9.7
3. Chronic care	324	341	348	344	5.2	2.1	-1.2
4. All levels of care	1,796	1,842	1,881	1,917	2.6	2.1	1.9
Federal Hospitals and Nursing Stations							
1. All levels of care	102	91	103	98	-10.8	13.2	-4.9
Total, all levels of care	1,898	1,933	1,984	2,015	1.8	2.6	1.6

The total of newborn under care decreased in volume again in 1963. Table D shows a 0.5 percent decrease for 1963 over 1962 compared with a decline of 0.7 percent in the previous calendar year. Although the number of newborn days rose by 11.8 percent for federal nursing stations, this increase did not materially affect the total volume of care. The newborn average length of stay in hospital rose slightly in 1963 to 6.8 days as compared to 6.7 days in 1962.

TABLE D

	Net	vborn und	er Care	Neu	born Days	Average Length of Stay of Newborn			
	1962	1963	% Increase or Decrease	1962	1963	% Increase or Decrease	1962		% Increase or Decrease
Hospitals in Ontario									
1. Public	156,010	155,433	-0.4	1,033,015	1,040,033	+0.7	6.7	6.8	+1.1
2. Private	2,902	2,724	-6.1	18,312	17,358	-5.2	6.5	6.4	-0.2
Stations	436	468	+7.3	2,884	3,223	+11.8	6.7	6.9	+2.7
Total Newborn	159,438	158,625	0.5	1,054,211	1,060,614	+0.6	6.7	6.8	+1.1

The total days of care in public active treatment hospitals shown in Table E is distributed by the type of care the patients received. A consistent increase took place in all services and, with one exception, ranged from 3.8 to 6.0 percent. The smallest growth was in obstetrical days which compares very closely with the 0.6 percent increase in newborn days in Table D. The category of "All Other" in Table E contains convalescent and chronic days in those units attached to public active treatment hospitals.

	TABLE	E			crease crease
Days by Type of Service in Public Active Treatment Hospitals	1961	1962	1963	1962/61	1963/62

Diagnoses of Patients Separated from Hospital (See Tables 10, 11 & 12).

The morbidity statistics in Tables 10, 11 and 12 are listed according to the Canadian List of 98 primary diagnoses. The diagnoses shown on all active treatment and convalescent admission-discharge forms processed by the Commission during 1963 are tabulated and shown in Table 10. The breakdown of the morbidity data shown in Table 11 refers to patients in hospitals for the chronically-ill and are grouped by major category of illness. Table 11 shows the leading causes of death in all hospitals.

In Table F the active treatment and convalescent patients separated from hospital are shown in descending order by major diagnostic grouping. In the three years of publication of these data the groupings have remained in the same order. Only minor changes occurred in the percentage each group bears to the total and in the average length of stay per group.

TABLE F

	Numb	er of Separ	ations (1)				
			% Increase or Decrease		Discharges Deaths		e Length Stay
Diagnostic Groupings	1962	1963	1963/62	1962	1963	1962	1963
Deliveries and Complications of Pregnancy, Childbirth and Puerperium		204,281	-1.4	21.6	20.7	5.9	5.9
Diseases of the Respiratory System	145,180	157,298	8.3	15.2	15.9 (2) 5.7	5.7
Diseases of the Digestive System	122,779	126,912	3.4	12.8	12.9	10.4	10.4
Accidents, Poisonings and Violence	84,825	87,682	3.4	8.9	8.9	11.2	11.3
Diseases of the Genito-Urinary System	83,230	84,052	1.0	8.7	8.5	9.0	9.2
Diseases of the Circulatory System	73,975	77,951	5.4	7.7	7.9	18.4	18.1
All other diseases and conditions	240,852	247,894	2.9	25.1	25.2 (2) 15.1	15.1
Totals	958,052	986,070	2.9	100.0	100.0	10.5	10.5

Perusal of Table 10 indicates that the five most common conditions requiring hospitalization are, (absolute number of patients are shown in brackets), maternal deliveries (140,988), hypertrophy of tonsils and adenoids (82,069), arteriosclerotic and degenerative heart diseases (34,414), accidents, poisonings and violence, exclusive of fractures, dislocations, sprains and burns (31,424) and pneumonia (29,058). The latter diagnosis replaced complications of pregnancy which was reported fifth in 1962. Fracture of the femur again had the longest average length of stay, but continued its decrease from 46.9 to 44.5 days between 1961 and 1963. The shortest average length of stay was tonsils and adenoids with 1.9 days while diseases of the teeth and supporting structure came next with a stay of 2.5 days.

Vascular lesions affecting the central nervous system was the prime reason for the hospitalization of chronically-ill patients and averaged 385.7 days. Inflammatory and other diseases of the central nervous system, however, had the longest stay with an average of 503 days in hospital. The average length of stay for all chronic patients has decreased substantially since the Plan began in 1959, when it was 383.4 days as opposed to 277.9 in 1963.

Table 12, which lists the conditions causing death in hospital, shows arteriosclerotic and degenerative heart disease as the cause for 5,769 deaths, or 22.8 percent of all deaths in active treatment and convalescent hospitals. Malignant neoplasms, formerly the leading cause of death, ranked second in 1963 with 4,025 cases or 15.9 percent of the total. Foremost among the causes of deaths to chronically-ill patients was vascular lesions affecting the central nervous system. The 909 deaths accounted for 24.2 percent of the total deaths and equalled all deaths attributed to malignant neoplasms.

⁽¹⁾ Includes all adults and children separated from active treatment and convalescent hospitals in 1963 whose admission-discharge forms were processed between January 1-December 31, 1963.

⁽²⁾ Due to rounding of decimal places this percentage shows a minor variance with the same category in Table 10.

1963 xiii

Special Services Provided by Hospitals

Laboratory (See Tables 4 and 15)

The 1960 edition of the Schedule of Unit Values for Clinical Laboratory Procedures published by the Dominion Bureau of Statistics is used by hospital laboratories to determine the unit evaluation for each laboratory procedure. The unit represents 10 minutes of time, 7 minutes of which are allotted to technical functions and the remaining 3 minutes to stenographic services, glass washing and other non-technical services performed in the laboratory. Included in the number of units of value are some procedures that are performed mostly outside the laboratory, such as basal metabolic rates, electrocardiographs and electroencephalographs. Excluded from the count of units are all interpretive, clinical, diagnostic, consultative, teaching and research functions.

Substantial increases in the volume of laboratory services continued from 1962 into 1963. The total laboratory work done within the hospital increased by 17.0 percent over 1962. Most of this increase was on behalf of in-patients as 4,443,319 more units of work were done than in 1962. Relatively speaking, the greatest increase was due to specimens referred in, although the absolute increase in this area was only 468,322 units of work.

TABLE G

	Volum	e of Laboratory	Services	% Increase	or Decrease
Public General Hospitals	1961	1962	1963	1962/61	1963/62
In-patients					
Total Units of Work	23,064,168	26,746,237	31,189,556	16.0	16.6
Units per In-patient	25.45	28.85	32.41	13.8	12.3
Units per In-patient day	2.58	2.88	3.22	17.1	11.8
Out-patients	2,907,623	3,036,623	3,386,743	4.4	11.5
Units for Specimens					
Referred-in	1,181,966	1,213,477	1,681,799	2.7	38.6
Total work done in hospitals	27,153,757	30,996,337	36,258,098	14.2	17.0

Although Table G excludes figures for public convalescent and chronic hospitals as the amount of laboratory work performed by these hospitals was minimal it does contain units of work for the convalescent and chronic units attached to public general hospitals. Reference should be made to Table 15 for specific laboratory information by hospital.

Radiology (see Tables 5 and 6)

The volume of diagnostic radiology performed in 1963 in public general hospitals showed a substantial increase when compared with 1962, both in terms of examinations and films taken. The percentage increase however during 1963 was not as great as during the previous year. Amendments have been made to the number of "total" and "all other radiographic" examinations reported for in-patients during 1961 and 1962, for reasons explained in footnote 3 of Table 5.

	TAB	LE H		Of Increase	or Decrease
Public General Hospitals Radiological Examinations	1961	1962	1963	1962/61	1963/62
In-patients Routine chest All other radiographic	300,045 626,852	317,403 714,933	316,621 773,024	5.8 14.1	-0.2 8.1
Out-patients Routine chest All other radiographic Total examinations		100,390 784,104 1,916,830	90,532 857,164 2,037,341	32.1 11.8 12.5	-9.8 9.3 6.3
Films Taken In-patients Out-patients Total films taken	2,469,721	2,790,420 2,413,860 5,204,280	3,008,439 2,664,066 5,672,505	13.0 12.0 12.5	7.8 10.4 9.0

Thirty-four hospitals in Ontario provided therapeutic radiology in 1963. The Ontario Cancer Treatment and Research Foundation operated The Princess Margaret Hospital in Toronto and seven clinics attached to public general hospitals. Although the number of patients receiving treatments decreased, the number of treatments that were given increased. As a result the number of treatments per patient increased from 8.8 in 1962 to 10.2 in 1963.

Staffing of Hospitals (See Tables 7, 16, 18, 19 and 20)

It can be seen in Table J that the increase or decrease in the number of full-time staff seems to closely parallel the increase or decrease in the number of available beds. The staffing pattern of part-time employees is more variable than full-time and is not consistent enough to warrant much attention.

TABLE J

			En	ployees on Staff	as at Dec	ember 31s	t
	Rated Beds % Increase		Full-	-time		Part-t	ime

Formal Training Programmes in Public Hospitals (See Table 9)

Table K presents in capsule form the detailed data found in Table 9. The latter table provides information on the major paramedical courses given in those hospitals approved under the Plan.

The greatest change observed in Table K occurred in both the enrolment of radiological technicians and the number that graduated. The percentage increases from 1962 to 1963 were 10.5 and 31.2 respectively. The percentage increase on enrolment of laboratory technicians was quite substantial although the number that graduated was smaller than the year before.

The number of hospitals providing courses increased by 5 for radiological technicians, 3 for laboratory technicians and 3 for nursing assistants.

TABLE K

	Number	Enroln	ent at De	ecember 31st	Ni	ımber tha	t Graduated
School or Course Public General Hospitals	of Hospitals	1962	1963	% Increase or Decrease	1962	1963	% Increase or Decrease
Nurses	56	7,483	7,611	1.7	2,073	2,122	2.4
Radiological Technicians	64	373	412	10.5	125	164	31.2
Laboratory Technicians	55	356	414	16.3	201	189	-6.0
Medical Record Librarians	3	16	17	6.3	20	16	-20.0
Nursing Assistants	29	510	517	1.4	403	551	36.7
Public Hospitals for the Chronically-Ill							
Nursing Assistants	2	57	39	-31.6	95	85	-10.5

The Nightingale School of Nursing has been omitted from Table K since it is not operated by a hospital. Fifty-two nurses graduated in 1963. The enrolment at December 31, 1963 was 113.

1963

II. FINANCIAL DATA (Tables 21 to 25)

The hospital operating expenses shown in the financial tables (21 to 25) was derived from the Annual Returns (HS-2) of public hospitals and their year-end settlement forms (HF series).

During 1963 the total financial responsibility of the Commission amounted to \$273,879,452. The distribution for 1963 as compared with 1962 and 1961 follows:

	,	TABLE L			ncrease ecrease)
	1961	1962	1963	1962/61	1963/62
Public Hospitals in Ontario	\$197,365,190	\$224,313,770	\$252,167,477	13.65	12.42
Hospitals outside Ontario	2,375,929	2,812,577	3,210,340	18.37	14.14
Federal Government Hospitals	6,293,063	6,215,383	6,829,531	(1.24)	9.88
Privately owned hospitals, including nursing homes Out-patient services for emergency	7,730,817	8,083,855	8,461,046	4.57	4.67
care	2,841,487	4,336,411	5,006,628	52.61	15.46
Recoveries from other insurers	(1,793,546)	(1,318,946)	(1,795,570)	(26.46)	(36.14)
Total	\$214,812,940	\$244,443,050	\$273,879,452	13.79	12.04

Readers of this Supplement are cautioned that valid comparisons can only be made with a thorough knowledge of the various number and types of administrative and other practices occurring within individual hospitals which are reflected in the data presented herein. Operating costs vary widely from hospital to hospital and are dependent upon a number of factors such as composition and layout of plant facilities, number and qualifications of staff, types of treatment given, percentage of beds occupied, the operation of a School of Nursing or other training programmes and the volume of out-patient services offered.

⁽¹⁾ Includes (a) the Orthopaedic and Arthritic Hospital, Toronto, which is using 45 beds in the Hastings Building at the Riverdale Hospital, Toronto, while its new hospital is being constructed, (b) the York Central Hospital, Richmond Hill, opened in December 1963 and (c) the South Muskoka Memorial Hospital, Bracebridge, which opened in October 1963.

⁽²⁾ The new Riverdale Hospital, Toronto, opened in June 1963 with 409 convalescent beds.

⁽³⁾ New units for the chronically-ill were opened at South Muskoka Hospital, Bracebridge, October 2, 1963; Clinton Public Hospital, Clinton, May 15, 1963; Collingwood, Collingwood, December 20, 1963; Collingwood, Osciental Hospital, Oshawa, January 15, 1963, and Owen Sound General and Marine Hospital, Owen Sound, March 26, 1963. The new Riverdale Hospital, Toronto, which opened in June 1963 has a chronic unit of 438 beds without the 99 beds in the older Hastings Building. The 92 bed chronic unit at St. Catharines General, St. Catharines, was decreased to 66 in May of 1963.

GIVEN IN ONTARIO, 1963

 ^{(4) (}a) Lakeshore Private Hospital, New Toronto, is included in the number of licensed private hospitals, but was not in operation in 1963.
 (b) The Caramat Infirmary, Caramat, closed in November 1963 and the Beckliffe Private Hospital, Hagersville, closed in May 1963.
 The only data not shown for these hospitals are the number of licensed beds.

(b) The 7 bed geriatric unit in the Dalmeny Private Hospital (Chronic Patient Unit), Toronto, was reclassified to nervous ailment.

^{(5) (}a) The Pines Private Hospital, Clarkson, was closed at the beginning of the year. The Woodland Private Hospital, Toronto, ceased to operate under the Plan January 1963.

⁽⁶⁾ The patients and days in the Rideau Health and Occupational Centre, Convalescent Unit, Ottawa, are combined with the figures for chronic care and shown only in the Chronic column as they were not reported separately by the hospital.

⁽⁷⁾ Three nursing homes ceased to operate under the Plan on June 30, 1963.

TS-Denotes Training School for Nurses.

See Table 13 for similar data on Chronic Unit.

See Table 13 for similar data on Convalescent Unit,

Includes isolation beds and beg patients requiring lang term care in hospitals that do not have officially recognized convalescent or chronic units. It also includes beds in specific areas set aside for medical and surgical specialfies such as orthopaedics, cardiology, neuro-surgery, urology, gynaecology, ophthalmology and intensive care. 323

Each hospital's percentage occupancy was based on the number of rated beds throughout the year and not not not the final bed capacity shown. Those hospitals that had any change in their rated beds. The percentage occupancy for the total calculated on the number of rated beds. The percentage occupancy for the total The percentage occupancy for the total of each Group and grand total were used on the total rated beds at the year end. (4)

Bracebridge, Bracebridge Memorial Hospital—dosed in October 1963. There were no rated beds at December 31, 1963 therefore the 35 beds were omitted from the table.

Hamilton, The Hamilton Civic Hospitals is composed of two hospitals. These hospitals have been listed separately. It is necessary to combine them for a complete picture of the Hamilton Civic Hospitals.

(5) These percentages were based on the number of set-up or rated bads as at December 31, 1963.

(6) Hamilton, The Hamilton Civic Hospitals is composed of two hospitals. These hospitals have been listed separately. It is necessary to combine them for a composed of two hospitals. There have been listed separately. It is necessary to combine them for a composed of two hospitals are distributed into 578 Medical and Surgical, 62 Isolation and 6 Intensive Care.

(8) Bracebridge, Bracebridge Memorial Hospital—lossed in October 1963. There were no rated beds at December 31, 1963 therefore the 35 beds were omit (9) Richmood Hill, Vork Central Hospital—popened in December 1963.

(10) Troonto, Orthopoedic and Arthrift Hospital—is using 45 beds in the Hastings Building at the Riverdale Hospital while the new hospital is being constructed.

(11) Bracebridge, South Muskoka Hospital—opened in October 1963.

(12) Those hospitals that had significant increases or decreases in the number of rated beds from December 31, 1962 to December 31, 1963 are listed below:

TS-Denotes Training School for Nurses.

(1) See Table 13 for similar data on Chronic Unit.

(2) See Table 13 for similar data on Convolescent Unit.
 (3) Hamilton, The Hamilton Civic Hospitals is composed of two hospitals. These hospitals have been listed separately. It is necessary to combine them for a complete picture of the Hamilton Civic hampetel.
 (4) Bracebridge, Bracebridge Memorial Hospital—losed in October 1963. There were no rated beds of December 31, 1963 therefore the 35 beds were omitted from the table.
 (5) Richmond Hill, York Central Hospital—popened in December 1963.
 (6) Toronto, Orthopaedic and Arthritic Hospital—is using 45 beds in the Hastings Building at the Riverdale Hospital while the new hospital is being constructed.
 (7) Bracebridge, South Muskoka Hospital—opened in October 1963.
 (8) Newborn admissions do not necessarily equal the live-births in hospital since the admissions include any newborn born on the way to hospital and who were admitted to the hospital nursery.

TS-Denotes Training School for Nurses.

(1) Laboratory services performed for patients in the Chronic Unit are included.

(2) Laboratory services performed for patients in the Convalescent Unit are included.

(3) As the amount of laboratory services performed on behalf of patients in the convalescent and/or chronic unit(s) was believed to be negligible a lesser distortion seemed assured in these calculations by using only active treatment patients and days as the divisors.

The number of hours used in each calculation were, of necessity, the total hours for all laboratory staff (excluding pathologists) and not for technicians alone.

Hamilton, The Hamilton Civic Hospitals is composed of two hospitals. These hospitals have been listed separately. It is necessary to combine them for a complete picture of the Hamilton Civic Hospitals.

There were no rated beds at December 31, 1963 therefore the 35 beds were omitted from the table. Bracebridge, Bracebridge Memorial Hospital—closed in October 1963.

Bracebridge, South Muskoka Hospital—opened in October 1963. (9)

(4)

Richmond Hill, York Central Hospital—opened in December 1963. (8)

Toronto, Orthopaeedic and Arthritic Hospital—is using 45 beds in the Hastings Building at the Riverdale Hospital while the new hospital is being constructed. (6)

Those hospitals that did not report either laboratory units of value or hours of work for the laboratory department were not included in the calculations for Group B, C, D and grand total.

"All other diagnostic

Radiological services performed for patients in the Chronic Unit are included.

(2) (2) (3) (3) (4) (4) (6) (6) (7) (8)

nations" does not compare with previous years as a duplication of fluoroscopic examinations with film has been eliminated from 1963 data. Radiological services performed for patients in the Convalescent Unit are included.

Hamilton, The Hamilton Civic Hospitals is composed of two hospitals. These hospitals have been listed separately. It is necessary to combine them for a complete picture of the Hamilton Civic Hospitals.

Bracebridge, Bracebridge Memorial Hospital—dosed in October 1963. There were no rated beds at December 31, 1963 therefore the 35 beds were amitted from the table.

Bracebridge, South Muskoka Hospital—opened in October 1963.

Richmond Hill, York Central Mospital opened in December 1963.

Toronto, Orthopaedic and Arthritic Hospital—is using 45 beds in the Hastings Building at the Riverdale Hospital while the new hospital is being constructed.

1963

⁽¹⁾ Seven clinics in Ontario and the Princess Margaret Hospital, Toronto are operated by the Ontario Cancer Treatment and Research Foundation.

⁽³⁾ The calculations for Group A hospitals and total hospitals did not include the number of treatments in the Toronto General Hospital as the hospital could not provide the figure of the number of patients receiving therapy.

Each percentage was based on the number of rated beds throughout the year and not on the final bed capacity shown. Group totals and the grand total were calculated on the number of rated beds at December 31, 1963.
 Based on Convalescent or Chronic beds set up at December 31, 1963.
 Calculations exclude 409 Convalescent beds in Toronto, Riverdale Hospital.
 Calculations exclude 64 Rehabilitation beds set up in Hamilton, Chedoke General and Children's Hospital, Brow Infirmary (Convaled to 1911).

(5) Toranto, Riverdale Hospital—The new hospital opened in June 1963. Since the convalescent beds were not used there are no statistics for 1963.

CONVALESCENT

CHRONIC.

(b) Taronto, Riverdale Hospital—A 438 bed Chronic unit was opened in June 1963.

(7) Bracebridge, South Muskoka Hospital—Chronic unit opened in October 1963.

(8) Clinton, Clinton Public Hospital—Chronic unit opened in May 1963.

(9) Collingwood, Collingwood General and Martine Hospital—Chronic unit opened December 20, 1963.

(10) Oshawa, Oshawa General Hospital—Chronic unit opened January 15, 1963.

(11) Owen Sound, Owen Sound General and Marine Hospital—Chronic unit opened March 26, 1963.

(12) St. Catharines, St. Catharines, General Hospital—The former 92 bed chronic unit was reduced to 66 beds in May 1963.

(1) Unless otherwise nated bed capacity refers to active, convalescent and or chronic beds. Not shown are beds in Department of Veterans Affairs hospitals assigned to accommodate committed mental patients and

(2) Based on rated active and chronic beds. The two exceptions are the domiciliary beds in Ottawa Rideau Health and Occupational Centre and tuberculosis beds in Moose Factory Indian Hospital. (4) Moose Factory Indian Hospital—beds for tuberculosis patients not shown in rated bed capacity, statistics however include figures relating to tuberculosis care.

(5) Ottawa Rideau Health and Occupational Centre—statistics include figures relating to domiciliary care.
(6) Personnel figures include those persons employed in the long term mental, domiciliary and tuberculosis units.

⁽¹⁾ Includes operating costs for Chronic Unit.
(2) Includes operating costs for Convalescent Unit.
(3) The salary and wage percentage of gross operating costs is 66.36%.
(4) Toronto, New Mount Sinai—The Nightlingale School of Nursing is included.
(5) Toronto, The Princess Margaret—The major proportion of expenditures relate to research and care of out-patients.
(5) Richmond Hill, York Central opened in December, 1963.
(7) Bracebridge, South Muskaka Memorial opened October 1, 1963.
